

Simon Chang

Riverside, California | chang88simon@gmail.com | [Portfolio](#)

Education

California State University Northridge - B.S Computer Science

Fall 2022 - Spring 2025

Riverside City College - A.S Math and Science, A.A Social and Behavioral Studies

Fall 2019 - Spring 2022

Technical Skills

Certificate: AWS Cloud Technical Essentials

Maven Analytics Certificates: Thinking Like An Analyst, Python Foundations for Data Analysis

Skills: Python, Tableau, MySQL, SQL Server, JS, HTML5, CSS3, GitHub Desktop, VS Code, AWS, Agile/Scrum, Jira

Projects

Maven Dashboard - Tableau

Spring 2026

- Guided to create a Tableau dashboard while learning about Tableau
- Executed end-to-end ETL processes, utilizing data blending and joins to unify disparate data sources for comprehensive analysis
- Synthesized multi-source datasets into a cohesive Tableau dashboard, utilizing advanced filtering and LOD expressions
- Designed a high-fidelity visualization focused on user-centric storytelling, implementing action filters and parameters to allow for granular data exploration

Portfolio - React, HTML, Tailwind, Vite

Fall 2025

- Architected a modular React-based personal platform, implementing custom hooks and reusable components to ensure a codebase that doesn't repeat itself
- Developed a centralized design system using Tailwind CSS utility classes, ensuring visual consistency and accessibility across all sub-pages
- Optimized cross-platform performance using responsive design principles and CSS Grid/Flexbox

Mock Hackathon Schema - SQL Server

Spring 2025

- Designed a normalized database schema with ER diagram and implemented it using SQL Server
- Developed a robust back-end architecture by implementing check constraints and triggers to enforce complex business rules for project evaluation and judge assignments
- Engineered complex stored procedures and common table expressions to calculate real-time leaderboards based on multi-factor weighted scoring algorithms

Next Note Generation : LSTM - Python

Fall 2024

- Developed an LSTM-based recurrent neural network to generate musical sequences, optimizing hyperparameters to reduce categorical cross-entropy loss
- Tokenized datasets, tuned models, and evaluated generative accuracy using MIT open datasets

Grocery Store Database - MySQL

Fall 2024

- Developed a normalized MySQL database for retail operations using triggers and stored procedures to automate inventory updates and maintain data integrity
- Optimized database performance by implementing indexing strategies, reducing query execution time for high-frequency inventory lookups

Unity 2D Bullet Hell - C#, Github Desktop

Spring 2024

- Led a team of 3 to develop a 2D shooter, streamlining the asset pipeline by integrating AI-generated sprites into the Unity workflow
- Engineered a scalable state machine for game loops and implemented object pooling to maintain a consistent 60 FPS during high-intensity gameplay

Work Experience

Miss Donuts: Front of House

Fall 2022 - May 2025

- Managed high-volume customer service during evening shifts with consistent quality and accuracy
- Took initiative during staff shortages and maintained workflow efficiency

CSUSB Mentored Summer STEM Research

June 2021 - July 2021

- Participated in full-time structured research with peer-led collaboration
- Developed clear explanations and assisted teammates in understanding technical problems
